*Re: Coyle/Coleman Accessory Structure Septic Design, 529 Church Hill Rd. Charlotte VT*

Dear Jeannine,

I have enclosed the wastewater plans along with the application for an accessory residential building at the above mentioned parcel on Church Hill Rd. I performed soil test pits with Brian Tremback and have discussed the proposal with Brian prior to final design. The proposal consists of a prescriptive mound disposal system suitable for flows up to a 2-br residence and a new drilled well to the northwest of the residence. The existing 4-bedroom residence on the parcel is currently served by a conventional disposal system and drilled on site well located upslope from the proposed residence. A site visit revealed no indications of failure of the existing system at the time of my visit. Overall this proposal is intended to meet the current wastewater rules and it is my opinion the proposed mound is suitable for the proposed accessory residence. If you have questions regarding the proposal, feel free to contact me.

Sincerely,

Spencer K. Harris, for
