Re: Disposal System Upgrade, 3046 Greenbush Rd. Charlotte, Vermont

Dear Brian,

I have enclosed the plans for a disposal system upgrade at the above mentioned residence on Greenbush Rd. in Charlotte. The owners are considering selling the parcel and are intending to upgrade the older disposal system. As we previously discussed I reviewed soil test pits on 11/8/16 and the testing revealed well drained soils capable of supporting a conventional disposal system. I have proposed three disposal trenches to handle the flows for the existing 4-bedroom residence. There is also an accessory residence on the parcel with a separate disposal system that will remain unchanged at this time. Both dwellings are served by the drilled on site well adjacent to the drive. Overall this proposal is a substantial upgrade over the existing disposal system and there is sufficient area for the replacement disposal system. The owners are anticipating installing this as soon as feasible so if you have questions, please do not hesitate to contact me. Thank You.

Sincerely,

Spencer K. Harris, for
