RE: Wastewater Disposal System Certification - WW-138-1807

Dear Gerald:

We are writing this letter to complete and fulfill the requirements of the State of Vermont concerning a newly constructed wastewater disposal system. Between September and November, 2018, the new wastewater disposal system for the property located at 7598 Spear Street in Charlotte was sited, constructed and periodically observed by this office. All required inspections were conducted. The extent of the inspections were limited to work that could be visually verified during each visit. The wastewater system installation periodically observed by our office including the disposal area, septic tank, pump station and final grading, seeding and mulching. Settled or eroded areas may occur over time and may require repair. Additional topsoil, seeding and mulching may also be necessary to establish property vegetative cover.

In accordance with the Vermont Environmental Protection Rules, Chapter 1, Wastewater system and potable water supply Rules effective September 29, 2007;

"I hereby certify that, in the exercise of my reasonable professional judgment, the installation-related information submitted is true and correct, and that, the wastewater disposal system was installed in accordance with the permitted design and all permit conditions, was inspected, was properly tested, and has successfully met those performance tests."

As per a permit requirement, a copy of this letter was sent to the State of Vermont Department of Environmental Conservation. If you have any questions, please do not hesitate to give me a call.

Regards,

Kevin R. LaRose
