***Re: Septic Design Resubmittal, 322 Orchard Rd. Charlotte, Vermont***

Dear Jeannine,

I have enclosed the hard copies of the information you previously received via email. This proposal includes the resubmittal of the septic design information for Lot #2 originally approved by the Town of Charlotte in 2004. The design information for the Lot was originally submitted by Ridge Consulting Engineers. I have discussed the proposal with both Dave Fuqua and Craig Heindel, who reviewed the soils, to receive approval to utilize some of the original information. Since the original approval of the parcel and design, the driveway and a portion of the disposal system force main has been installed. The disposal system proposed is identical to the original mound design for the subdivision. The proposed drilled well for the parcel has been shifted to keep the isolation zone on the parcel and lessen the impact on the neighbors. The proposal includes a barn and new residence connected to the disposal system with the intended use of the barn for occupants of the residence. Overall this submittal is intended to re-permit what was previously approved by the Town of Charlotte during the subdivision process. Act 145 notification was completed for the impacted neighbors with the certified receipts included. If you have questions regarding the proposal, feel free to contact me. Thanks You.

Sincerely,

Spencer K. Harris, for
