

WASTEWATER SYSTEM AND POTABLE WATER SUPPLY PERMIT**LAWS/REGULATIONS INVOLVED**

10 V.S.A. Chapter 64, Potable Water Supply and Wastewater System Permit
Wastewater System and Potable Water Supply Rules, Effective September 29, 2007
Chapter 21, Water Supply Rules, Effective December 1, 2010

Landowner(s): Denise and Thomas Kessler
585 Greenbush Road
North Ferrisburgh, VT 05473

Permit Number: WW-138-1803
PIN: EJ18-0065

This permit affects properties identified as Town Tax Parcel ID 00007-1687, referenced in a deed recorded in Book 78, Pages 212-213 of the Land Records in Charlotte, Vermont.

This application proposes to convert an existing two-bedroom dwelling and feline veterinary practice, permitted previously in WW-4-0684, to a two-bedroom dwelling plus a one-bedroom dwelling with no veterinary practice. The previously approved total design flow was **432 GPD**; the new approved total design flow is **420 GPD**. This permit is also valid for the use of the existing home as a three-bedroom, single family dwelling, with the same approved design flow of **420 GPD**. No changes are otherwise proposed to existing, approved water supply and wastewater disposal systems.

This project is hereby approved under the requirements of the regulations named above subject to the following conditions.

1. GENERAL

- 1.1 The project shall be completed as shown on the documents prepared by Gunner McCain of McCain Consulting, Inc.
- 1.2 This permit does not relieve the landowner from obtaining all other approvals and permits including, but not limited to, those that may be required from the Act 250 Environmental Commission; the Drinking Water and Groundwater Protection Division; the Watershed Management Division; the Division of Fire Safety; the Vermont Department of Health; the Family Services Division; or other State departments and local officials.
- 1.3 The conditions of this permit shall run with the land and will be binding upon and enforceable against the landowner and all assigns and successors in interest. The landowner shall record and index this permit in the Charlotte Land Records within thirty, (30) days of issuance of this permit and prior to the conveyance of any lot subject to the jurisdiction of this permit.
- 1.4 The landowner shall record and index all required installation certifications and other documents that are required to be filed under these Rules or under a specific permit condition in the Land Records and ensure that copies of all certifications are sent to the Secretary.
- 1.5 The well and wastewater system are accepted as is, although they do not appear to meet the standard isolation distance. Any future proposed construction or increase in design flow will need to receive a permit and be in full compliance of standard isolation distance.
- 1.6 By acceptance of this permit, the landowner agrees to allow representatives of the State of Vermont access to the property subject to this permit, at reasonable times, for the purpose of ascertaining compliance with Vermont environmental/health statutes, regulations, and permit conditions, including performing an inspection of the wastewater disposal and water supply systems serving the structure.

- 1.7 Any person aggrieved by this permit may appeal to the Environmental Court within 30 days of the date of issuance of this permit in accordance with 10 V.S.A. Chapter 220 and the Vermont Rules of Environmental Court Proceedings.

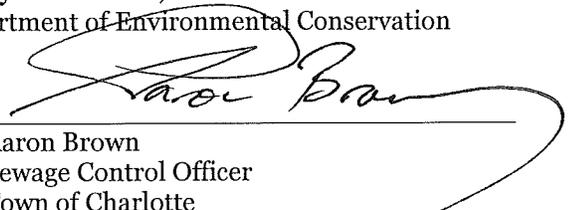

2. WATER SUPPLY

- 2.1 The project is approved with an existing on-site drilled well water supply system having a maximum design flow of **420 gallons per day**, provided the water supply meets or exceeds the isolation distances, construction standards, and water quality standards required in the Water Supply Rule. The landowner shall operate the potable water supply in a manner that keeps the supply free from contamination.
- 2.2 No other changes are otherwise proposed to existing, approved water supply and wastewater disposal systems. Construction of additional nonexempt buildings, including commercial and residential buildings, is not allowed without prior review and approval by the Drinking Water and Groundwater Protection Division, and such approval will not be granted unless the proposal conforms to the applicable laws and regulations. By acceptance of this permit, the landowner agrees to allow representatives of the State of Vermont access to the property covered by the permit, at reasonable times, for the purpose of ascertaining compliance with the Vermont environmental and health statutes and regulations, and permit conditions.
- 2.3 No changes shall be made to the water system unless prior approval is obtained from the Town, and the State Drinking Water and Groundwater Protection Division. No other means of obtaining potable water shall be allowed without prior review and approval from the Division, unless otherwise exempt. The landowner shall immediately notify the Division if the water supply system fails to function properly and becomes a "failed supply."
- 2.4 As noted in the original 1993 State permit WW-4-0684, the applicant [was] hereby notified that the water sample results submitted with the application indicated that the odor parameter exceeded the recommended threshold number of 3. Odor is a secondary contaminant and, by itself, should not pose a health risk for human consumption.
- 2.5 The applicant must maintain a well that provides a minimum flow of 10 gallons per minute (GPM) to accommodate 2 units at 5 GPM.

3. WASTEWATER DISPOSAL

- 3.1 This project is approved with an existing wastewater disposal system with a maximum design flow of **420 gallons per day**. No changes other than those specifically approved in this permit shall be made to the existing wastewater system unless prior approval is obtained from the Drinking Water and Groundwater Protection Division. Should the system fail and not qualify for the minor repair or replacement exemption, the landowner shall engage a qualified Vermont Licensed Designer to evaluate the cause of the failure and to submit an application to Drinking Water and Groundwater Protection Division and receive written approval prior to correcting the failure.
- 3.2 No buildings, roads, water lines, earthwork, re-grading, excavation or other construction that might interfere with the installation or operation of the wastewater disposal systems are allowed on or near the site-specific wastewater disposal system or replacement area depicted on the stamped plans. All isolation distances that are set forth in the Wastewater System and Potable Water Supply Rules will be incorporated into and shall be adhered to for the construction and installation of the wastewater disposal field.
- 3.3 No changes are proposed nor approved to the existing wastewater disposal system as approved previously. No changes may be made to the system, nor shall discharge of other type process wastewater is permitted, unless prior written approval is obtained from the Town, and the State Drinking Water and Groundwater Protection Division.
